Projects & Experience

FindSpot | Price Comparison Platform | GitHub | Live **Mar–Apr 2026**

- Built a price comparison platform aggregating data from 7+ e-commerce sources (Amazon, Flipkart) using **RapidAPI** and **Cheerio-based scraping**, reducing manual comparison time by ~90%.
- Designed secure multi-factor authentication using **Google OAuth 2.0, JWT (1-hour sessions)**, and Email OTP (Brevo, 5-min expiry) for robust user identity verification.
- Architected scalable RESTful backend services on Render and MongoDB Atlas, implementing rate limiting, CORS, and Helmet.js while maintaining high availability **(~99.9% uptime)** via **cron-based** monitoring.
- Optimized client-side performance using local Storage caching, reducing redundant **API calls by ~60%** and improving response latency.
- Tech: Node.js, MongoDB, React, REST APIs, JWT, OAuth 2.0, CORS

DevTrack | Developer Analytics Platform | GitHub | Live **Jan–Mar 2026**

- Built a unified coding analytics platform aggregating real-time data from **LeetCode (GraphQL),** GitHub, and **Codeforces (REST APIs**), reducing API latency by **95% (1800ms to 85ms)** using **MongoDB caching** and eliminating **rate limiting**.
- Designed secure multi-provider authentication using Email/OTP (Brevo), **GitHub OAuth 2.0, and Google OAuth 2.0**, with **JWT-based sessions** (7-day expiry) and OTP auto-expiry via MongoDB TTL indexes (5 min).
- Engineered a DSA weakness scoring engine across 14 topics using weighted metrics and adaptive thresholds, generating personalized problem recommendations while optimizing frontend performance using React **Context caching** to **reduce API calls by ~60%**.
- Deployed a production-grade full-stack system on Vercel, Render, and MongoDB Atlas, **implementing cron-based** keepalive (14 min) to **prevent cold starts** and ensure high availability.
- Tech: Node.js, Express, MongoDB, React, GraphQL, REST APIs, JWT, OAuth 2.0, node-cron

Training

Summer Training - C++ & Data Structures | GitHub **Jun–Jul 2025**

- Completed training in **C++ (OOP) and Data Structures**, implementing arrays, linked lists, stacks, and queues with focus on time and space complexity.
- Built a **console-based** Library Management System using OOP and file-based persistence, supporting search, issue/return workflows, and user record management.
- Designed a **modular, menu-driven architecture** with CRUD operations and structured file handling for scalable record management.
- Tech: C++, OOP, Data Structures, STL, File Handling, Dynamic Memory Management

Achievements & Certificates

Advanced Computer Networks – NPTEL **Apr 2025**

The Bits and Bytes of Computer Networking – Coursera **Jan 2025**

Solved 500+ DSA problems across LeetCode, Codeforces, and other platforms | LeetCode Rating: 1700+

IIT-JEE Advanced: AIR < 10,000

Technical Skills

Languages: C++, JavaScript, PHP, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS

Backend: RESTful APIs, GraphQL, API Design, Authentication (JWT, OAuth 2.0), Caching, Rate Limiting

Databases & Tools: MongoDB, MongoDB Atlas, MySQL, Git, GitHub, Vercel, Render

Core Skills: Data Structures & Algorithms, Object-Oriented Programming (OOP), Problem-Solving, System Design

Education

Lovely Professional University **2023 – 2027**

Computer Science and Engineering — CGPA: 7.5 *Jalandhar, Punjab*

Saraswati Vidya Mandir Senior Secondary School **2020 – 2022**

12th with Science — Percentage: 90.4% *Lucknow, Uttar Pradesh*
